

MOBILE CCTV SOLUTIONS

SOLAR POWERED MOBILE CCTV TRAILERS

Mobile CCTV Solutions trailers can both compliment and replace traditional static security guards, mobile patrols and fixed CCTV camera systems. **Mobile CCTV Solutions** are independent units that are capable of recording and transmitting live video images across 4GX networks. Each trailer has its own Internet connection and network recorder which can be remotely and securely accessed from any computer or mobile compatible device from around the world. **Mobile CCTV Solutions** use 100% solar powered technology with diesel generator for emergency backup.

Our trailers are self sufficient in operation for months on end, without main powered connection or diesel fuel generators. Up to the second live footage and historical event recording that can be remotely viewed by multi users. Combined with PIR motion detection, our trailers can be programmed to send alarm signaling messages to security control rooms, network centres, PCs or hand held mobile devices. Our systems can also be programmed to activate flood lighting, audible sirens, strobes and control PTZ camera positioning to the area of detection.

360° Camera View

Independent Day Night lenses

360° PIR Detection

Up to 60m diameter

LAN, 4G & Wifi
